The Morella

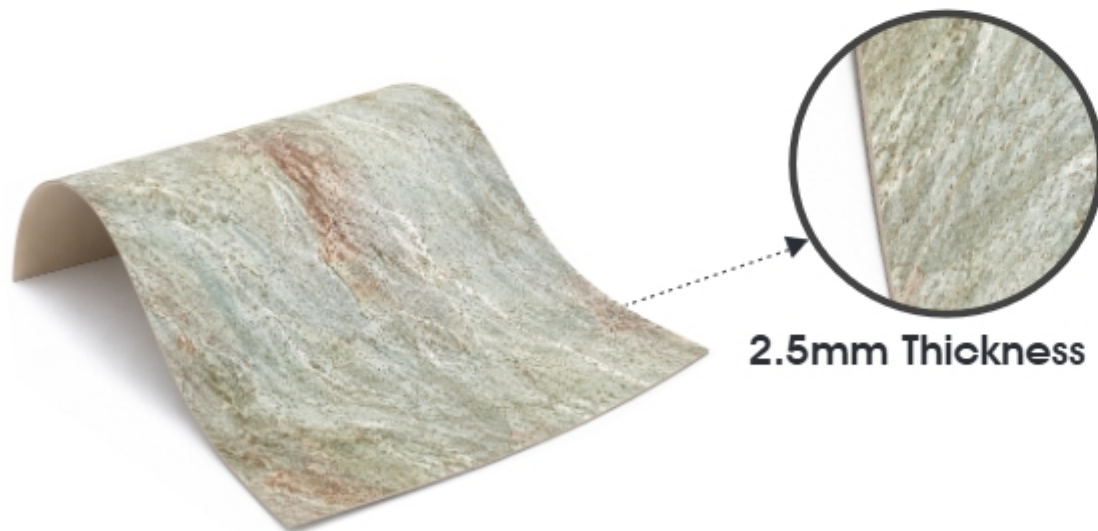

High in the hills of eastern Spain stands a town that has outlasted empires. Morella's walls two and a half kilometres of stone, fourteen centuries old have weathered the Reconquista the Carlist Wars, and the slow turning of history itself and they're still standing not as ruins.

As home Some say the town's name comes from molella "a great mass of stone" It's a fitting origin Because what makes Morella remarkable isn't that its stone has survived. It's that the people of Morella never stopped living inside it. The walls aren't behind glass they're where children play, where bakers bake, where seven generations of the same family have opened their doors each morning stone as a part of daily life, not a monument to it. that's the idea behind Morella the brand. Stone shouldn't be something you visit. It should be something you live with on the walls of your home, the ceiling of your café, the facade you walk past every day. We took the strength and beauty that stone has always carried, and made it light enough, flexible enough and easy enough to bring into everyday spaces without losing what made it worth building with in the first place Sturdy Beautiful Lived in **"That's Morella"**

WALL BUILD TO LAST....

SOFT STONE CLAY PANEL

Product Specification

Material	Flexible mineral composite + acrylic polymer on flexible substrate
Weight	Up to 80-85% lighter than Granite/Marble
Fire Rating	Class A (GB 8624) very low smoke, no flaming droplets
Radioactivity	Class A decorative material (lowest risk class)
Water Absorption	11.3%
Weather tested	Rain exposure with no cracking, peeling or blistering
Stain-Resistant	only 1% reflectance change after repeated dirt exposure
Low Mess Installation	Cuts and Fits like a sheet material

Full SGS test reports available on request for architects, contractors and procurement teams

STONE CLAY PANELS

INSTALLATION GUIDE

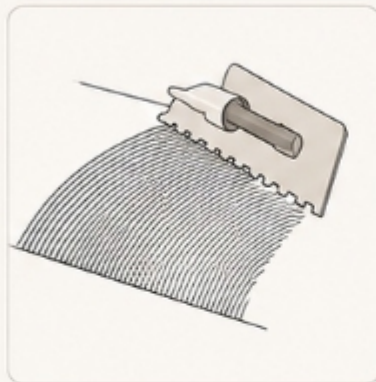

Simple steps for a beautiful finish

1 PREPARE SURFACE

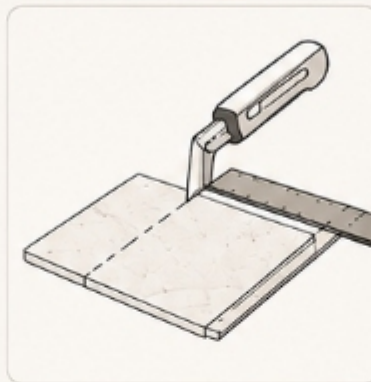

- Clean the surface and remove dust, debris, or any loose particles.
- Ensure the surface is dry, even, and strong.

2 APPLY ADHESIVE

- Apply suitable adhesive evenly on the back of the stone clay panel using a notched trowel.
- Ensure full coverage for strong bonding.

3 CUT & POSITION

- Measure and cut the panel as per the required size.
- Mark the position and align the panel on the wall.

4 PRESS & SECURE

- Press the panel firmly against the wall.
- Adjust gently to ensure perfect alignment.

5 CLEAN FINISH

- Wipe off any excess adhesive immediately with a damp sponge or cloth before it dries.

INSTALLATION NOTES

- Stone clay panels can be installed using suitable adhesive.
- For best results, follow the adhesive manufacturer's instructions.
- For joint filling, use "Filling and Pointing" method for a clean and seamless finish.

PRODUCT QUALITY

- Stone clay panels are designed to replicate real stone with natural beauty and character.
- Slight variations in color, texture, and pattern are inherent to the product and not considered defects.
- These variations ensure each panel has a unique and authentic look.

IMPORTANT NOTES

- Minor air holes or surface marks are natural and not manufacturing defects.
- Product size may vary $\pm 2\text{mm}$ on diagonal.
- Shade variations may occur between batches or within the same batch.
